Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1 - 25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26 - 160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

Barnes, D. P., and V.E. Magnusson. 2000. Water temperatures at selected sites in the Fraser River basin from 1997 to 1999. Can. Data Rep. Fish. Aquat. Sci. 1071: 226 pp.

ABSTRACT

Barnes, D. P., and V.E. Magnusson. 2000. Water temperatures at selected sites in the Fraser River basin from 1997 to 1999. Can. Data Rep. Fish. Aquat. Sci. 1071: 226 pp.

Electronic water temperature data loggers were installed and maintained in the Fraser River Basin in 1997 and throughout 1999. Hourly maximum, minimum, and mean temperatures were recorded at 26 sites in 1997, 28 sites in 1998, and 27 sites in 1999.

The daily maximum, minimum, and mean water temperatures are presented.

RÉSUMÉ

Barnes, D. P., and V.E. Magnusson. 2000. Water temperatures at selected sites in the Fraser River basin from 1997 to 1999. Can. Data Rep. Fish. Aquat. Sci. 1071: 226 pp.

Des enregistreurs électroniques de la température de l'eau ont été installés dans le bassin du Fraser en 1997 où ils ont été maintenus jusqu'en 1999. Les températures horaires maximum, minimum, et moyennes ont été enregistrées dans 26 sites en 1997, 28 sites en 1998, et 27 sites en 1999.

Les températures quotidiennes maximum, minimum, et moyennes sont également données.

INTRODUCTION

Recognizing the profound effect warm water has on migrating adult salmon (Pearse and Larkin, 1992), the Science Branch of Fisheries and Oceans Canada has collected water temperatures throughout the mainstem Fraser River and its larger tributaries since 1993 (Lauzier et al. 1995; Barnes and Walthers, 1997; Brown et al. 1998). The collected data is used in a predictive model (Foreman et al. 1997) by managers to assess potential risks to migrating salmon, especially the Early Stuart, Early Summer, and Summer stocks of Fraser River sockeye (*Oncorhynchus nerka*).

In addition to the mainstem Fraser River and its larger tributaries, data loggers were installed year round in selected streams containing populations of coho (*O. kisutch*), chinook (*O. tshawytscha*), and steelhead (*O. mykiss*) in 1996. Data loggers were also installed in smaller streams suspected of being used as coolwater refugia for upstream migrating sockeye. This was done to provide habitat managers with baseline information for short- and long-term temperature change, and to offer estimates for in-stream egg and alevin development and fry emergence.

In 1997, more data loggers were deployed in the North Thompson River drainage in streams populated by coho and chinook (i.e., those streams below Little Hell's Gate on the North Thompson) and in those streams upstream of the obstruction that have severely depressed populations (H. Stalberg, Fisheries and Oceans Canada, personal communication). With the collaboration of the Habitat and Enhancement Branch (Kamloops office), these depressed stock areas were studied to provide year round temperature regimes that can be used in conjunction with possible future enhancement strategies.

In 1998, when water temperatures reached record levels, additional data loggers were deployed in the Quesnel River drainage to gauge its effects on migrating and spawning Horsefly River sockeye (Macdonald et al. 2000).

Average water temperatures (°C) were calculated hourly and recorded at 26 sites during 1997, 28 sites in 1998, and 26 sites in 1999.

MATERIALS AND METHODS

The ten sites in the watershed used for the predictive model were equipped with dial-up real-time data loggers supplied by Forest Technology Systems, Victoria, B.C. Data logger sites and site descriptions for the predictive model were based on temperature data collected from past years (Lauzier et al. 1995; Barnes and Walthers 1997; Brown et al. 1998).

Site descriptions for all temperature data loggers are listed in Table 1. Site locations for the real-time predictive model data loggers are shown in Figure 1. Barnes and Walthers (1997) discuss their configuration, deployment, and programming information in detail. As in past years, temperature readings with a hand-held calibrated thermometer were used to assess the accuracy of the factory calibrated real-time data loggers.

Fraser River stations were identified by the initials FR followed by the approximate number of kilometres upstream from Steveston. The tributary stations were identified with initials and kilometres from their confluences.

Due to a slide in the Quesnel River in 1997, the site QR1 had its thermistors buried in silt resulting in a temperature of mixed surface and sub-surface water with little diel fluctuation. Because of this inaccuracy, the 1997 data set is not included in the results. The site on the South Thompson River at Chase (STR60) was vandalized during the spring of 1999, and due to time constraints was not replaced.

Two sites, Fraser River at Qualark (FR190) and Thompson River at Ashcroft (TR80) were left in to record temperatures over winter and are being used by MoELP for steelhead and white sturgeon (*Acipenser transmontanus*) migration studies (R. Bison, MoELP, personal communication).

The remaining coho, chinook, and coolwater refugia stream sites were equipped with Vemco Minilog data loggers. Barnes and Walthers also discuss details of their configuration in 1997. The accuracy of these data loggers was checked with a calibrated thermometer before deployment and at the time of downloading; all were found to be within 0.5°C. Site descriptions are included in Table 1. Site locations for these secondary data loggers are shown in Figure 2.

Despite efforts to visit the above secondary logger sites as often as possible to ensure data continuity, several were again vandalized or found to be de-watered. Future deployment of Vemco data loggers will require a greater effort to ensure they are properly hidden and placed in areas not as susceptible to de-watering.

RESULTS

The data are presented in Table 2 as daily maximum, minimum, and mean water temperatures for each site.

ACKNOWLEDGEMENTS

The authors thank Jeremy Hume and Tom J. Brown for assistance in data analysis, as well as the Pacific Salmon Commission for permission to use the Fraser River watershed map. Thanks also to the Carrier Sekanni Tribal Council for water temperature data from the Stuart River. Dennis Girodat, Rich Elson, Jim Michie, Glenn Lario, Merv Mochizuki, and Don Lawrence assisted with equipment deployment.
